AUTHORISED CORPORATE DIRECTOR'S REPORT

We are pleased to present the Annual Long Report and Audited Financial Statements for the Orbis OEIC (the "Company") for the year ended 31 December 2024. All figures in this report are sourced from Orbis Investment Management Limited, unless stated otherwise.

Authorised status

The Company, a collective investment scheme authorised by the Financial Conduct Authority (the "FCA"), is incorporated in England and Wales as a UCITS scheme pursuant to Regulation 14 of the Open-Ended Investment Companies Regulations 2001 (the "OEIC Regulations") under registered number IC000992. The Company is an umbrella company with three funds, the Global Equity Fund, the Global Balanced Fund and the Global Cautious Fund (each a "Fund" and collectively the "Funds"). The effective date of the Company's authorisation order was 31 October 2013. The Global Equity Fund and the Global Balanced Fund were launched on 1 January 2014 and the Global Cautious Fund was launched on 1 January 2019.

Each Fund is separately managed, charged, accounted for and assessed for tax. The assets of each Fund belong exclusively to that Fund and cannot be used to pay the debts of another Fund. Shareholders are not liable for the debts of the Company.

The Company is structured as an open-ended investment company, also known as an "investment company with variable capital" or ICVC. FCA-authorised ICVCs are required to appoint an Authorised Corporate Director ("ACD"). The ACD is responsible for the day-to-day management of the ICVC. The Company has appointed Orbis Investments (U.K.) Limited as its ACD. The ACD is a UK UCITS Management Company and is authorised and regulated by the FCA. Its registered office address is 28 Dorset Square, London, NW1 6QG, United Kingdom.

Statement of ACD's responsibilities

The OEIC Regulations and the COLL sourcebook require the ACD to prepare financial statements for each annual and half-yearly accounting period which give a true and fair view of the financial position of the Company and of its net revenue or expense and net capital gains or losses on the property of the Company for the period then ended. In preparing the financial statements the ACD is required to:

- select suitable accounting policies and then apply them consistently;
- comply with the Statement of Recommended Practice for Authorised Funds issued by the Investment Association, the COLL sourcebook, the Prospectus and the Instrument of Incorporation;
- follow generally accepted accounting principles and applicable accounting standards;
- keep proper accounting records which enable it to demonstrate that the financial statements as prepared comply with the above requirements;
- prepare the financial statements on the going concern basis unless it is inappropriate to presume the Company will continue in operation; and
- take reasonable steps for the prevention and detection of fraud or other irregularities.

Changes to the Company during the year

There have been no changes to the Company during the year.

Risk profile of the Funds

All investments carry risk. Different investment strategies may carry different levels of risk, depending on the assets that make up the strategy. Assets with the highest long-term returns may also carry the highest level of risks. The Synthetic Risk and Reward Indicator ("SRRI") of each Fund is listed in this report, but please refer to Section 15 of "Part Four: Information Relating to the Company" of the Prospectus for a full description of the risk factors applicable to the Funds.

No shares of any Fund were held by other Funds of the Company during the period covered by this report.

In accordance with the requirements of the OEIC Regulations, the report and financial statements are approved on behalf of the directors of the ACD.

INDEPENDENT AUDITOR'S REPORT

To the Shareholders of Orbis OEIC

Opinion

We have audited the financial statements of Orbis OEIC (the “Company”) comprising each of its sub-funds for the year ended 31 December 2024, which comprise the Statement of Total Return, the Statement of Change in Net Assets Attributable to Shareholders, the Balance Sheet, the related notes and the Distribution Tables, and the accounting policies of the Company, which include a summary of significant accounting policies. The financial reporting framework that has been applied in their preparation is applicable law and United Kingdom Accounting Standards including FRS 102 ‘The Financial Reporting Standard applicable to the UK and Republic of Ireland’ (United Kingdom Generally Accepted Accounting Practice).

In our opinion, the financial statements:

- give a true and fair view of the financial position of the Company comprising each of its sub-funds as at 31 December 2024 and of the net revenue and the net capital gains on the scheme property of the Company comprising each of its sub-funds for the year then ended; and
- have been properly prepared in accordance with United Kingdom Generally Accepted Accounting Practice.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (UK) (ISAs (UK)) and applicable law. Our responsibilities under those standards are further described in the Auditor’s responsibilities for the audit of the financial statements section of our report below. We are independent of the Company in accordance with the ethical requirements that are relevant to our audit of the financial statements in the UK, including the Financial Reporting Council’s (the “FRC”) Ethical Standard, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the Authorised Corporate Director’s (the “ACD”) use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the Company’s ability to continue as a going concern for a period of twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the ACD with respect to going concern are described in the relevant sections of this report. However, because not all future events or conditions can be predicted, this statement is not a guarantee as to the Company’s ability to continue as a going concern.

Other information

The other information comprises the information included in the Annual Report other than the financial statements and our auditor’s report thereon. The ACD is responsible for the other information contained within the Annual Report.

Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in this report, we do not express any form of assurance conclusion thereon.

INDEPENDENT AUDITOR'S REPORT (CONTINUED)

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether this gives rise to a material misstatement in the financial statements themselves. If, based on the work we have performed, we conclude that there is a material misstatement of the other information, we are required to report that fact.

We have nothing to report in this regard.

Opinions on other matters prescribed by the rules of the Collective Investment Schemes Sourcebook of the Financial Conduct Authority (the "FCA")

In our opinion:

- the financial statements have been properly prepared in accordance with the Statement of Recommended Practice relating to Authorised Funds, the rules of the Collective Investment Schemes Sourcebook of the FCA and the Instrument of Incorporation;
- there is nothing to indicate that adequate accounting records have not been kept or that the financial statements are not in agreement with those records; and
- the information given in the ACD's report for the financial year for which the financial statements are prepared is consistent with the financial statements.

Matters on which we are required to report by exception

We have nothing to report in respect of the following matter in relation to which the Collective Investment Schemes Sourcebook of the FCA requires us to report to you if, in our opinion:

- we have not received all the information and explanations which, to the best of our knowledge and belief, are necessary for the purposes of our audit.

Responsibilities of the ACD

As explained more fully in the ACD's responsibilities statement set out on page 2, the ACD is responsible for the preparation of the financial statements and for being satisfied that they give a true and fair view, and for such internal control as the ACD determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the ACD is responsible for assessing the Company's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the ACD either intends to wind up or terminate the Company or to cease operations, or has no realistic alternative but to do so.

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with ISAs (UK) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

Explanation as to what extent the audit was considered capable of detecting irregularities, including fraud

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect irregularities, including fraud. The risk of not detecting a material misstatement due to fraud is higher than the risk of not detecting one resulting from error, as fraud may involve deliberate concealment by, for example, forgery or intentional misrepresentations, or through collusion.

INDEPENDENT AUDITOR'S REPORT (CONTINUED)

The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below. However, the primary responsibility for the prevention and detection of fraud rests with both those charged with governance of the entity and management.

Our approach was as follows:

- We obtained an understanding of the legal and regulatory frameworks that are applicable to the Company and determined that the most significant are United Kingdom Generally Accepted Accounting Practice, Investment Management Association's Statement of Recommended Practice (IMA SORP), the FCA Collective Investment Schemes Sourcebook, the OEIC Regulations, the Company's Instrument of Incorporation and the Prospectus.
- We understood how the Company is complying with those frameworks through discussions with the ACD and the Company's administrator and a review of the Company's documented policies and procedures.
- We assessed the susceptibility of the Company's financial statements to material misstatement, including how fraud might occur by considering the risk of management override, specifically management's propensity to influence revenue and amounts available for distribution. We identified a fraud risk with respect to the incomplete or inaccurate income recognition through incorrect classification of special dividends and the resulting impact to amounts available for distribution. We tested the appropriateness of management's classification for a sample of special dividends as either a capital or revenue return.
- Based on this understanding we designed our audit procedures to identify non-compliance with such laws and regulations. Our procedures involved review of the reporting to the ACD with respect to the application of the documented policies and procedures and review of the financial statements to test compliance with the reporting requirements of the Company.
- Due to the regulated nature of the Company, the Statutory Auditor considered the experience and expertise of the engagement team to ensure that the team had the appropriate competence and capabilities, which included the use of specialists where appropriate, to identify non-compliance with the applicable laws and regulations.

A further description of our responsibilities for the audit of the financial statements is located on the FRC's website at <https://www.frc.org.uk/auditorsresponsibilities>. This description forms part of our auditor's report.

Use of our report

This report is made solely to the Company's Shareholders, as a body, pursuant to Paragraph 4.5.12 of the rules of the Collective Investment Schemes Sourcebook of the FCA. Our audit work has been undertaken so that we might state to the Company's Shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the Company and the Company's Shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

**STATEMENT OF THE DEPOSITARY'S RESPONSIBILITIES IN
RESPECT OF THE SCHEME AND REPORT OF THE DEPOSITARY****To the Shareholders of Orbis OEIC (the "Company") for the year ended 31 December 2024**

It is the duty of the Depositary to take reasonable care to ensure that the Company is managed in accordance with the Financial Conduct Authority's Collective Investment Schemes Sourcebook, the Open-Ended Investment Companies Regulations 2001 (SI 2001/1228) (the OEIC Regulations), as amended, (together "the Regulations"), the Company's Instrument of Incorporation, and the Prospectus (together "the Scheme Documents") as detailed below.

The Depositary must in the context of its role act honestly, fairly, professionally, independently and in the interests of the Company and its investors. The Depositary is responsible for the safekeeping of all custodial assets and maintaining a record of all other assets of the Company in accordance with the Regulations.

The Depositary must ensure that:

- the Company's cash flows are properly monitored, and that cash of the Company is booked into the cash accounts in accordance with the Regulations;
- the sale, issue, redemption and cancellation of shares are carried out in accordance with the Regulations;
- the value of shares of the Company are calculated in accordance with the Regulations,
- the Company's income is applied in accordance with the Regulations; and
- the instructions of the ACD are carried out (unless they conflict with the Regulations).

Having carried out procedures and enquiries considered duly necessary to discharge our responsibilities as Depositary of the Company, based on information and explanations provided to us, we believe that, in all material respects, the Company, acting through the AFM:

- (i) has carried out the issue, sale, redemption and cancellation, and calculation of the price of the Company's shares and the application of the Company's income in accordance with the Regulations and Scheme Documents; and
- (ii) has observed the investment and borrowing powers and restrictions applicable to the Company.

Citibank UK Limited
London
26 February 2025

INVESTMENT MANAGER'S REPORT

Performance Summary¹

Performance for the year ended 31 December 2024 (% , in GBP)	
Orbis OEIC Global Equity Fund, Standard Share Class, after fees	14.6
Benchmark: MSCI World Index	20.8
Peer group: Investment Association Global Sector, after fees	12.8

Stockpicking alpha, mostly attributed to our stock selections in the US, drove the underperformance. Only 45% of our stock selections outperformed, and the median loser underperformed more than the median winner won.

GXO Logistics, a US-based provider of contract logistics services, was the biggest loser at the individual stock level, detracting approximately 1.5 percentage points from relative returns. GXO underperformed as it faced a challenging consumer demand environment, particularly in Europe. The share price rose by 20% in October on takeover rumours but subsequently reverted after the company announced that CEO Malcolm Wilson would retire in 2025 and the market's enthusiasm around deal completion faded. We retained conviction in the business quality and resilience of GXO, and it remained a significant position in the portfolio as at 31 December 2024.

US-based managed care organisations **UnitedHealth Group** and **Elevance Health** were also among the biggest losers, detracting close to 2 percentage points in aggregate. The underperformance was driven by heightened political risk and suppressed earnings guidance, attributed to a mismatch between reimbursement rates and expenses in Medicaid, a public health insurance programme. Political risk increased following the announcement that a known vaccine sceptic would be nominated as the next Health and Human Services secretary in the US and intensified after the shooting of the UnitedHealth insurance division CEO, Brian Thompson. Despite this, we retained our conviction in both stocks, which were top-10 positions in the portfolio as at 31 December 2024.

Intel, a semiconductor manufacturer, was also among the biggest losers, detracting around 1.5 percentage points from relative returns. Sentiment has been weak and Q1 results announced in April were disappointing, with lower-than-expected earnings and revenue guidance. We sold the position in Intel in June 2024 to allocate capital to opportunities that we believed offered more compelling risk-adjusted return potential.

QXO was the biggest winner, contributing around 2.5 percentage points, at the individual stock level. QXO is a US-listed investment vehicle, led by XPO chairman Brad Jacobs, with the goal of consolidating and modernising companies in the building products distribution market in the US and Europe. We invested in the company through a private placement and share price performance was favourable following the placement. QXO was the largest position in the portfolio as at 31 December 2024.

Our currency selections, which are driven by where we find the best long-term store of purchasing power, detracted around 2 percentage points from relative returns in aggregate. This was driven by the portfolio's overweight accounting exposure to the Japanese yen, which weakened relative to other currencies, and underweight exposure to the US dollar which strengthened. The Japanese yen weakened as Japanese interest rates remained low, while the US dollar was supported by strong US economic performance and the expected impact of trade and immigration policies under Donald Trump.

INVESTMENT MANAGER'S REPORT (CONTINUED)

Portfolio Positioning and Notable Trading Activity¹

The Fund's positioning is primarily the outcome of our investment team's bottom-up work on individual stocks. While the portfolio naturally takes on aggregate characteristics in sectors as a whole, this is always an outcome of our bottom-up process, rather than an intention to position the portfolio in a particular way or to follow a top-down approach.

Around 60% of the Fund was invested in stocks classified in the following areas:

- Industrials
- Communication Services
- United Kingdom
- Financial Services
- US Health Care Providers & Services
- South Korea

These areas, in aggregate, made up approximately 25% of the Fund's benchmark, the MSCI World Index.

By contrast, holdings in the US Information Technology, Consumer Discretionary, Health Care (excluding Health Care Providers & Services) and Consumer Staples sectors and Continental Europe collectively made up around 25% of the Fund but 55% of the MSCI World Index.

We initiated a new position in **QXO** through a private placement, to take advantage of an opportunity to invest behind a proven capital allocator at an early stage. We increased the portfolio's position in **Alphabet**, Google's parent company, which is in our view a reasonably priced technology company with a unique suite of assets. We also added to the positions in **UnitedHealth Group** and **Elevance Health**, into relative share price weakness. We funded these purchases by exiting the positions in **Constellation Energy**, the largest producer of carbon-free electricity in the US, and Japanese banks **Sumitomo Mitsui Financial Group** and **Mitsubishi UFJ Financial Group**, into relative price strength.

¹ Percentages are calculated in accordance with the valuation policies of the Company which may apply either mid or close prices depending on the securities held. These may differ from the percentages as stated in the Portfolio Statement of the Fund and elsewhere in this report, which is prepared in accordance with the accounting policies in the notes to the financial statements.

FUND OVERVIEW

Investment Objective

The Fund seeks to deliver higher long-term returns than global stock markets, without taking on greater risk of loss. To meet this objective, the Fund is targeting outperformance of the long-term returns of its Benchmark, the MSCI World Index, which measures the performance of some of the largest companies listed on stock exchanges around the world.

Investment Policy

In pursuing its investment objective, the Fund will invest primarily in shares of publicly listed companies, which may be located anywhere in the world and in any industry.

While the Fund aims to be fully invested in selected shares of such companies, it may, to the extent permitted by the Fund's investment restrictions, also periodically hold cash and invest in other types of investments such as other transferable securities, money market instruments, deposits, derivative instruments or other investment funds.

At any given time, Orbis will invest in a limited selection of shares, from around the world, that it considers to be most undervalued compared to its assessment of what they are worth. As a result, the Fund's holdings may be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others.

From time to time, the Fund may utilise exchange-traded derivatives, e.g. futures and options on broad stock market indices in regions in which the Fund is invested, for efficient portfolio management purposes by helping the Fund be continuously fully exposed to equities.

Similarly, Orbis actively manages the Fund's currency exposure, which can also differ greatly from the currency exposures of its Benchmark and therefore may significantly influence returns. The Fund may use forward currency contracts to provide protection against exchange rate risks in the context of the management of its assets and liabilities. The Fund may also be long in currencies, without holding underlying assets in those currencies. The Fund will not enter into derivatives transactions for the purpose of causing net negative currency exposures. Net negative currency exposures which arise as a result of the Fund's regular portfolio management activities are eliminated taking due account of the interests of Shareholders. Indirect currency exposure may be taken by holding underlying assets in these currencies.

Risk Profile

The fundamental risk associated with any stock portfolio is the permanent loss of capital. Stock values may fluctuate in response to the activities of an individual company or in response to general market and/or economic conditions.

The Fund's currency exposure is actively managed and can differ greatly from the currency exposures of its Benchmark which may significantly influence returns.

The Fund's holdings usually differ meaningfully from the Benchmark and will often be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others. This means that events causing a decline in the value of holdings in regions or industries in which the Fund is invested may have a significant effect on the Fund's value and its performance may differ significantly from the Benchmark.

The Fund offers no capital guarantee or protection.

More information in relation to risks in general may be found in the "Risk Factors" section of the Prospectus which can be found online at www.orbis.com/uk/individual/funds/documents.

FUND OVERVIEW (CONTINUED)**Synthetic Risk and Reward Indicator**

The Risk and Reward Indicator is a simple measure of the risk associated with investing in the Fund. The higher the rank, ranging from Category 1 to Category 7, the greater the potential reward but the greater the risk of losing money.

Historical data, such as the data used in calculating this indicator may not be a reliable indicator of the future risk profile of the Fund.

The risk and reward category may shift over time and is not a target or a guarantee. The lowest category (i.e. Category 1) does not mean a risk-free investment.

The Fund is in **Category 6** because of the high range and frequency of price movements (volatility) of the underlying investments referenced by the Fund. The Fund's synthetic risk and reward category did not change during the period.

GLOBAL BALANCED FUND

INVESTMENT MANAGER'S REPORT

Performance Summary¹

Performance for the year ended 31 December 2024 (% , in GBP)	
Orbis OEIC Global Balanced Fund, Standard Share Class, after fees	15.0
Orbis OEIC Global Balanced Fund, Fixed Fee Share Class, after fees	15.1
Benchmark: 60% MSCI World Index and 40% J.P. Morgan Global Government Bond Index hedged into GBP ("60/40 Index")	12.6
Peer group: Investment Association Mixed Investments 40-85% Shares, after fees	8.9

The Fund's outperformance relative to its benchmark was primarily driven by security selection within equities, with around 55% of the capital deployed to equities outperforming the MSCI World Index.

Siemens Energy, a German energy technology company, **Mitsubishi Heavy Industries (MHI)**, a Japanese industrial conglomerate, and **Taiwan Semiconductor Manufacturing Company (TSMC)**, a Taiwanese semiconductor manufacturer, were the biggest contributors to relative returns at the individual stock level.

- Shares in Siemens Energy outperformed after the company reported strong results and management raised its outlook for the 2024 fiscal year, with the share price rising around 300% over the last year. Despite fears around the risks to the offshore wind industry following Donald Trump's election victory, the company confirmed that the US was not a key target market in the short-to-medium term. It remained a top-10 position in the portfolio as at 31 December 2024.
- MHI benefitted from a tailwind of increased global defence spending, was awarded significant defence contracts, and posted strong results. We trimmed the portfolio's position in MHI following a period of relative share price strength, but it remained a meaningful position in the portfolio as at 31 December 2024.
- TSMC benefitted from increased demand for leading-edge chips, fuelled by the growth in artificial intelligence computing. TSMC remained a top-10 position in the portfolio as at 31 December 2024.

Samsung Electronics, a Korean-based semiconductor manufacturer, was the largest detractor at the individual stock level. The fall in share price reflected market concerns over the long-term competitiveness of its memory and logic chips, as Samsung lagged the wider market. With the announcement of a management reshuffle, giving its semiconductor chief greater responsibility, as well as its first share buyback scheme in seven years, we believed that Samsung's valuation was compelling. It remained a top-10 position in the portfolio as at 31 December 2024.

In addition to our stock selections outperforming, our fixed income selections also outperformed the bond index in aggregate.

Asset allocation contributed positively to relative returns, driven by the portfolio's underweight exposure to nominal government bonds, which underperformed, and allocation to a gold-linked exchange-traded fund (ETF), which outperformed as the price of gold rose.

GLOBAL BALANCED FUND

INVESTMENT MANAGER'S REPORT (CONTINUED)

Positive contributions from security selection and asset allocation were partially offset by our currency selections which detracted. This was mainly driven by the portfolio's underweight accounting exposure to the US dollar, which strengthened relative to other currencies, supported by strong US economic performance and the expected impact of trade and immigration policies under Donald Trump. The portfolio's overweight accounting exposure to the Japanese yen, which weakened, also detracted from relative returns.

Portfolio Positioning and Notable Trading Activity¹

The Fund's positioning – including its asset allocation – is driven by a bottom-up competition for capital between individual securities.

As at 31 December 2024, around 60% of the Fund was invested in the following seven key overweight areas which, in aggregate, made up approximately 5% of the 60/40 Index:

- Energy
- Metals & Mining equities and Gold
- Asia ex-Japan Information Technology
- Aerospace and Defence
- Entertainment
- Critical Energy Infrastructure
- Inflation-Linked Government Bonds

By contrast, the portfolio had much smaller exposures to long-term government bonds and US equities compared to the 60/40 Index.

During the year, we increased the Fund's exposure to **US Treasury Inflation-Protected Securities (TIPS)** as we believed the exposure offered low-risk, real yield and inflation protection at an attractive price. We also initiated a position in **Arch Capital Group**, a Bermuda-based insurance company, which we believed to be a best-in-class operator in the industry, trading at a discount to its history. We exited the portfolio's position in selected Japanese equities, such as **Sumitomo Mitsui Financial Group** and **Sompo Holdings**, on relative share price strength and as the discount to our estimate of intrinsic value closed.

¹ Percentages are calculated in accordance with the valuation policies of the Company which may apply either mid or close prices depending on the securities held. These may differ from the percentages as stated in the Portfolio Statement of the Fund and elsewhere in this report, which is prepared in accordance with the accounting policies in the notes to the financial statements.

GLOBAL BALANCED FUND

FUND OVERVIEW

Investment Objective

The Fund seeks to balance investment returns and risk of loss using a diversified global portfolio. To meet this objective the Fund is targeting outperformance of the returns of its Benchmark, 60% MSCI World Index and 40% J.P. Morgan Global Government Bond Index, hedged into Sterling. This Benchmark combines indices which measure the performance of some of the largest companies listed on world stock exchanges and bonds issued by governments around the world.

Investment Policy

In pursuing its investment objective, the Fund will invest primarily in shares of publicly listed companies and fixed income instruments. These may be located anywhere in the world, in any industry and issued by governments, corporate entities, partnerships, business trusts or other issuers.

While the Fund aims to be fully invested in selected shares of such companies and fixed income instruments, it may, to the extent permitted by the Fund's investment restrictions, also invest indirectly in commodities such as metals through commodity-linked instruments as defined below. The Fund may also invest in other types of investments such as securities, cash, money market instruments, deposits, derivative instruments or other investment funds.

Orbis targets the portfolio to hold:

- 40 – 85% global equities
- < 50% fixed income instruments, cash and cash equivalents and
- 0 – 10% commodity-linked instruments.

However, the composition of the portfolio may from time to time move outside these targets in pursuit of the Fund's investment objectives.

For these purposes:

- fixed income instruments include debt securities with fixed and floating rates and money market instruments, and
- commodity-linked instruments are instruments and securities where an investor's return and the issuer's payment obligations are contingent on, or highly sensitive to, changes in the value of physical commodities (such as metals, energy and agricultural products), including, without limitation:
 - (a) exchange-traded funds that hold physical commodities or that enable investors to gain exposure to commodity indices; and,
 - (b) futures, forwards, options or swaps on a commodities index (but not on a single commodity);

but exclude exchange-traded funds that hold transferable securities, single name securities of companies that are exposed to the physical commodities sector, or futures, forwards, options or swaps on a financial index that is not linked to physical commodities.

At any given time, Orbis will invest in a limited selection of shares and fixed income instruments, from around the world that it considers to be most undervalued compared to its assessment of what they are worth. As a result, the Fund's holdings will often be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others.

From time to time the Fund uses derivatives such as futures and options on broad stock market and/or bond market indices in the regions in which the Fund is invested for efficient portfolio management purposes including with the intention of reducing the risk of loss associated with the Fund's equity and/or bond investments as a result of a significant decline in the stock and/or bond markets. This risk reduction may not be achieved.

FUND OVERVIEW (CONTINUED)

Similarly, Orbis actively manages the Fund's currency exposure. The Fund generally targets a minimum of 50% investment in established market currencies (US Dollar, Sterling and Euro) and a minimum 25% exposure to Sterling although the Fund may move outside these targets in pursuit of its objectives. These targets and the Fund's overall currency exposure can differ greatly from the currency exposures of its Benchmark and therefore may significantly influence returns. The Fund will not enter into derivatives transactions for the purpose of causing net negative currency exposures. Net negative currency exposures which arise as a result of the Fund's regular portfolio management activities are eliminated taking due account of the interests of Shareholders.

Risk Profile

Investing in stocks may offer a higher rate of return than investing in short-term and longer-term debt securities. However, the risks, including the risk of loss, associated with investments in stocks may also be higher.

The Fund does not aim to generate a significant level of income and does not target a specific yield and may not therefore be appropriate for investors seeking a regular income stream from their investment.

The Fund's currency exposure is actively managed and can differ greatly from the currency exposures of its Benchmark which may significantly influence returns.

The Fund's holdings usually differ meaningfully from the Benchmark and will often be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others. This means that events causing a decline in the value of holdings in regions or industries in which the Fund is invested may have a significant effect on the Fund's value and its performance may differ significantly from the Benchmark.

The Fund's derivative use may add to the Fund's returns during periods of stock market declines and detract from them during periods when stock market returns exceed those on cash. Use of derivatives generally may result in the Fund being leveraged and can result in increased volatility in the net asset value of the Fund.

The Fund offers no capital guarantee or protection.

More information in relation to risks in general may be found in the "Risk Factors" section of the Prospectus which can be found online at www.orbis.com/uk/individual/funds/documents.

Synthetic Risk and Reward Indicator

The Risk and Reward Indicator is a simple measure of the risk associated with investing in the Fund. The higher the rank, ranging from Category 1 to Category 7, the greater the potential reward but the greater the risk of losing money.

Historical data, such as the data used in calculating this indicator may not be a reliable indicator of the future risk profile of the Fund.

The risk and reward category may shift over time and is not a target or a guarantee. The lowest category (i.e. Category 1) does not mean a risk-free investment.

The Fund is in **Category 5** because of the medium range and frequency of price movements (volatility) of the underlying investments referenced by the Fund. The Fund's synthetic risk and reward category did not change during the year.

GLOBAL CAUTIOUS FUND

INVESTMENT MANAGER'S REPORT

Performance Summary¹

Performance for the year ended 31 December 2024 (% , in GBP)	
Orbis OEIC Global Cautious Fund, Standard Share Class, after fees	9.2
Orbis OEIC Global Cautious Fund, Fixed Fee Share Class, after fees	9.3
Benchmark: 30% MSCI World Index and 70% J.P. Morgan Global Government Bond Index hedged into GBP ("30/70 Index")	6.8
Peer group: Investment Association Mixed Investments 20-60% Shares, after fees	6.2

Fixed income security selection contributed positively to relative returns, this was driven by the portfolio's position in **US Treasury Inflation-Protected Securities (TIPS)**, which outperformed the benchmark's long-term government bonds. The portfolio's underweight exposure to nominal government bonds, which underperformed, also contributed positively to relative returns.

Security selection within equities also positively contributed to relative returns. **Siemens Energy**, a German energy technology company, and **Mitsubishi Heavy Industries (MHI)**, a Japanese industrial conglomerate, were the biggest contributors to relative returns at the individual stock level.

- Shares in Siemens Energy outperformed after the company reported strong results and management raised its outlook for the 2024 fiscal year, with the share price rising around 300% over the last year. Despite fears around the risks to the offshore wind industry following Donald Trump's election victory, the company confirmed that the US was not a key target market in the short-to-medium term. It remained a significant position in the portfolio as at 31 December 2024.
- MHI benefitted from a tailwind of increased global defence spending, was awarded significant defence contracts, and posted strong results. We trimmed the portfolio's position in MHI following a period of relative share price strength, but it remained a meaningful position in the portfolio as at 31 December 2024.

Samsung Electronics, a Korean-based semiconductor manufacturer, was the largest detractor at the individual stock level. The fall in share price reflects market concerns over the long-term competitiveness of its memory and logic chips, as Samsung lagged the wider market. With the announcement of a management reshuffle, giving its semiconductor chief greater responsibility, as well as its first share buyback scheme in seven years, we believed that Samsung's valuation was compelling. It remained a significant position in the portfolio as at 31 December 2024.

The Fund's allocation to a gold-linked exchange-traded fund (ETF), which outperformed as the price of gold rose, also contributed positively to relative returns.

Positive contributions from security selection and asset allocations were partially offset by our currency selections which detracted. This was mainly driven by the portfolio's underweight accounting exposure to the US dollar, which strengthened relative to other currencies, supported by strong US economic performance and the expected impact of trade and immigration policies under Donald Trump. The portfolio's overweight accounting exposure to the Japanese yen, which weakened, also detracted from relative returns.

INVESTMENT MANAGER'S REPORT (CONTINUED)

Portfolio Positioning and Notable Trading Activity¹

The Fund's positioning – including its asset allocation – is driven by a bottom-up competition for capital between individual securities.

As at 31 December 2024, 42% of the Fund was invested in equities, 52% in fixed income, and 7% in a gold-linked ETF. Equity hedging reduced the Fund's broad stockmarket exposure to 26%. Within fixed income, we have found attractive opportunities in TIPS, selected European government bonds and corporate bonds. Within equities we are overweight the UK and Europe, relative to the benchmark, and underweight the US. The Fund has meaningful holdings in the energy sector, semiconductor manufacturers, and defense contractors, with minimal exposure to the US tech juggernauts that have dominated markets this year.

During the year, we increased the portfolio's exposure to TIPS as we believed the exposure offered low-risk, real yield and inflation protection at an attractive price. Amidst rising yields, the opportunity set within fixed income became more attractive, and we initiated positions in selected European government bonds, and corporate bonds. We exited the portfolio's position in selected Japanese equities, such as **Sumitomo Mitsui Financial Group** and **Sompo Holdings**, on relative share price strength and as the discount to our estimate of intrinsic value closed.

¹ Percentages are calculated in accordance with the valuation policies of the Company which may apply either mid or close prices depending on the securities held. These may differ from the percentages as stated in the Portfolio Statement of the Fund and elsewhere in this report, which is prepared in accordance with the accounting policies in the notes to the financial statements.

GLOBAL CAUTIOUS FUND

FUND OVERVIEW

Investment Objective

The Fund seeks to apply a cautious balance between investment returns and risk of loss using a diversified global portfolio. To meet this objective, the Fund is targeting outperformance of the returns of its Benchmark, 70% J.P. Morgan Global Government Bond Index hedged into Sterling and 30% MSCI World Index. This Benchmark combines indices which measure the performance of bonds issued by governments around the world and some of the largest companies listed on world stock exchanges. In managing the Fund in accordance with this objective, the Investment Manager believes that an outcome will be growth over a rolling three-year period but returns are not guaranteed and a capital loss may occur.

Investment Policy

In pursuing its investment objective, the Fund will invest primarily in shares of publicly listed companies and fixed income instruments. These may be located anywhere in the world, in any industry and issued by governments, corporate entities, partnerships, business trusts or other issuers.

While the Fund aims to be fully invested in selected shares of such companies and fixed income instruments, it may, to the extent permitted by the Fund's investment restrictions also invest indirectly in commodities such as metals through commodity-linked instruments as defined below. The Fund may also invest in other types of investments such as securities, cash, money market instruments, deposits, derivative instruments or other investment funds, including investments that give the Fund exposure to real estate such as real estate investment trusts.

Orbis targets the portfolio to hold:

- 10 - 60% global equities
- 30 - 90% fixed income instruments, cash and cash equivalents and
- 0 - 20% commodity-linked instruments.

However, the composition of the portfolio may from time to time move outside these targets in pursuit of the Fund's investment objectives.

For these purposes:

- fixed income instruments include debt securities with fixed and floating rates and money market instruments; and
- commodity-linked instruments are instruments and securities where an investor's return and the issuer's payment obligations are contingent on, or highly sensitive to, changes in the value of physical commodities (such as metals, energy and agricultural products), including, without limitation:
 - (a) exchange-traded funds that hold physical commodities or that enable investors to gain exposure to commodity indices;
 - (b) futures, forwards, options or swaps on a commodities index (but not on a single commodity);

but exclude exchange-traded funds that hold transferable securities, single name securities of companies that are exposed to the physical commodities sector, or futures, forwards, options or swaps on a financial index that is not linked to physical commodities.

At any given time, Orbis will invest in a limited selection of shares and fixed income instruments, from around the world that it considers to be most undervalued compared to its assessment of what they are worth. As a result, the Fund's holdings will often be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others.

GLOBAL CAUTIOUS FUND

FUND OVERVIEW (CONTINUED)

The Fund intends to use derivatives such as futures and options on broad stock market and/or bond market indices in the regions in which the Fund is invested to maintain the Fund's exposure to stock markets net of hedging to between 0 and 40% of the net asset value of the Fund. The aggregate hedging of the Fund's stock market and bond market exposure will also be maintained between 0 and 40% of the net asset value of the Fund. The Investment Manager may cause the Fund to be outside these targets and limits where it considers this to be in the best interests of the Fund.

Similarly, Orbis actively manages the Fund's currency exposure. The Fund generally targets a minimum of 80% investment in established market currencies (US Dollar, Sterling and Euro) and a minimum 40% exposure to Sterling although the Fund may move outside these targets in pursuit of its objectives. These targets and the Fund's overall currency exposure can differ greatly from the currency exposures of its Benchmark and therefore may significantly influence returns. The Fund will not enter into derivatives transactions for the purpose of causing net negative currency exposures. Net negative currency exposures which arise as a result of the Fund's regular portfolio management activities are eliminated taking due account of the interests of Shareholders.

Risk Profile

Investing in stocks may offer a higher rate of return than investing in short-term and longer-term debt securities. However, the risks, including the risk of loss, associated with investments in stocks may also be higher.

The Fund's currency exposure is actively managed and can differ greatly from the currency exposures of its Benchmark which may significantly influence returns.

The Fund's holdings usually differ meaningfully from the Benchmark and will often be relatively concentrated in some geographic regions or industries, while at the same time having little or no exposure to others. This means that events causing a decline in the value of holdings in regions or industries in which the Fund is invested may have a significant effect on the Fund's value and its performance may differ significantly from the Benchmark.

The Fund's derivative use may add to the Fund's returns during periods of stock market declines and detract from them during periods when stock market returns exceed those on cash. Use of derivatives generally may result in the Fund being leveraged and can result in increased volatility in the net asset value of the Fund.

The Fund offers no capital guarantee or protection.

More information in relation to risks in general may be found in the "Risk Factors" section of the Prospectus which can be found online at www.orbis.com/uk/individual/funds/documents.

Synthetic Risk and Reward Indicator

The Risk and Reward Indicator is a simple measure of the risk associated with investing in the Fund. The higher the rank, ranging from Category 1 to Category 7, the greater the potential reward, but the greater the risk of losing money.

Historical data, such as the data used in calculating this indicator may not be a reliable indicator of the future risk profile of the Fund.

The risk and reward category may shift over time and is not a target or a guarantee. The lowest category (i.e. Category 1) does not mean a risk-free investment.

The Fund is in **Category 4** because of the medium range and frequency of price movements (volatility) of the underlying investments referenced by the Fund. The Fund's synthetic risk and reward category did not change during the year.

NOTES TO THE FINANCIAL STATEMENTS

FOR THE YEAR ENDED 31 DECEMBER 2024

1. General information

The Orbis OEIC (the "Company") was launched on 1 January 2014 as an open-ended investment company with variable capital. The Company is an umbrella company and currently consists of three sub-funds: the Global Equity Fund, the Global Balanced Fund and the Global Cautious Fund (collectively, the "Funds" or each, a "Fund").

2. Accounting policies

2.1 Basis of accounting

The financial statements have been prepared under the historical cost basis, as modified by the revaluation of investments, and in accordance with FRS 102, the Financial Reporting Standard applicable in the UK and Republic of Ireland and the Statement of Recommended Practice for Authorised Funds (the "SORP") issued by the Investment Association (the "IA") in May 2014 and amended in June 2017. The financial statements have been prepared on a going concern basis. There are no material events that have been identified that may cast significant doubt on the Company's ability to continue as a going concern for a period of twelve months from when the financial statements are authorised for issue.

2.2 Recognition of revenue

Dividends from quoted equity and non-equity shares are recognised as revenue when the security is quoted ex-dividend and the amount of the dividend is known with reasonable certainty. Where securities are not quoted, dividends are recognised when they are declared and the right to receive payment is established. Foreign dividends are disclosed prior to the deduction of any withholding tax with the tax element shown separately within the tax charge. Stock dividends are recognised as revenue based on the market value of the shares on the ex-dividend date. Where an enhancement is offered, the amount by which such market value exceeds the cash value is taken to capital. Special dividends and share buy backs are treated as either revenue or capital depending upon the circumstances of each particular case. Any tax treatment will follow the accounting treatment of the principal amount.

Revenue from fixed income securities is recognised on a straight-line basis, taking account of the premium or discount arising from the date of purchase to final maturity over the expected remaining life of the security. Accrued interest bought and sold on debt securities is excluded from the capital cost and included in revenue.

2.3 Treatment of expenses

All expenses, other than those relating to the purchase and sale of investments, are charged against, or in the case of performance fee refund, added to revenue and recorded on an accrual basis. Orbis Investment Management Limited reimburses the Funds for all operating expenses incurred excluding the cost of buying and selling assets, interest, brokerage, taxes and the management and performance fees, subject to an agreed annual maximum. The amount reimbursed is accrued and shown as Operating expense recovery on the Statements of total return.

2.4 Allocation of revenue and expenses to multiple share classes

The management and performance fees and any other revenue and expenses which can be allocated directly to individual share classes are charged to those share classes. Revenue and expenses which do not relate specifically to a particular share class are allocated between the share classes pro rata to their net asset values.

2.5 Taxation

Provision is made for corporation tax at the current rate on the excess of taxable revenue over allowable expenses. Deferred tax is recognised in respect of all timing differences that have originated but not reversed by the balance sheet date. Deferred tax liabilities are provided at the average rate of tax expected to apply whereas deferred tax assets are recognised only to the extent that they are more likely than not to be recoverable.

NOTES TO THE FINANCIAL STATEMENTS

2.6 Valuation of investments

Investments are recorded as of the trade date and stated at their market value at 5:30 pm Bermuda time (the "valuation point") on the last business day of the accounting period. Market value is defined by the SORP as fair value, which is generally the bid price of each security. Derivative assets and liabilities, including forward currency contracts and exchange-traded futures and options, are stated at their market value using available market prices. If market prices are unavailable or considered unrepresentative of fair value, a price considered fair shall be determined by the ACD in consultation with one or more of its delegates on the basis of the probable realisation value. Fair value of investments not traded in an active market, including over-the-counter derivatives, is determined using valuation techniques consistent with accepted methodologies for pricing these financial instruments, making the maximum use of market inputs and assumptions based on existing market conditions.

2.7 Offsetting

Financial assets and financial liabilities are offset when a Fund has a legally enforceable right to offset recognised amounts and either intends to settle on a net basis, or to realise the asset and settle the liability simultaneously.

2.8 Foreign exchange

Foreign currency transactions are translated into sterling using the exchange rate prevailing at the date of the transaction. Assets and liabilities denominated in foreign currencies are translated into sterling using the exchange rate prevailing at the valuation point on the last business day of the accounting period. Translation exchange gains and losses are included in Revenue or Net capital gains (losses) in the Statements of total return.

2.9 Derivatives

In pursuing its investment objectives or for efficient portfolio management purposes, a Fund may utilise derivative financial instruments. Where such derivatives are used to protect or enhance revenue, the revenue and expenses derived therefrom are included in Revenue in the Statements of total return. Where such derivatives are used to protect or enhance capital, the gains and losses derived therefrom are included in Net capital gains (losses) in the Statements of total return.

2.10 Dilution adjustment

The ACD may, at its discretion, charge a dilution adjustment to the price of shares on share issuances and cancellations on a Dealing Day if, in its opinion, existing shareholders (for issuances) or remaining shareholders (for cancellations) may otherwise be adversely affected, and if applying a dilution adjustment is, so far as practicable, fair to all shareholders and potential shareholders. If charged, such dilution adjustment will become part of the property of the relevant Fund.

3. Distribution policy

All available revenue after deduction of expenses properly chargeable against that revenue, as determined for each share class, is available for distribution annually. Stock dividends are not taken into account when determining the amount available for distribution. Revenue attributable to Accumulation shareholders is retained at the end of each distribution year and represents a reinvestment of revenue.

4. Equalisation policy

Equalisation only applies to shares purchased during the current distribution year (Group 2 shares purchased from 1 January 2024 to 31 December 2024). Equalisation is the average amount of revenue included in the purchase price of all Group 2 shares and is refunded to holders as a return of capital. Being capital, it is not liable to income tax but must be deducted from the cost of shares for capital gains purposes.

NOTES TO THE FINANCIAL STATEMENTS

5. Net capital gains (losses)

NOTES TO THE FINANCIAL STATEMENTS

8. Taxation

	Global Equity Fund		Global Balanced Fund		Global Cautious Fund	
	2024 £'000	2023 £'000	2024 £'000	2023 £'000	2024 £'000	2023 £'000
Analysis of charge for the year:						
UK corporation tax	55	37	281	155	280	222
Double tax relief	(3)	(5)	-	(20)	-	(5)
Overseas tax	426	298	599	337	123	79
Total tax	478	330	880	472	403	296

Factors affecting total taxation charge for the year:

The tax charged for the year is different to the standard 20% rate of corporation tax applicable to the revenue received by open-ended investment companies. The differences are explained below:

	Global Equity Fund		Global Balanced Fund		Global Cautious Fund	
	2024 £'000	2023 £'000	2024 £'000	2023 £'000	2024 £'000	2023 £'000
Net revenue before taxation	4,562	3,162	8,221	5,771	2,524	2,106
Net revenue before taxation multiplied by the standard rate of corporation tax of 20%	912	632	1,644	1,154	505	421
Effects of:						
Revenue not subject to taxation	(857)	(595)	(1,363)	(658)	(225)	(120)
Movement in surplus expenses	-	-	-	(341)	-	(79)
Overseas tax	426	298	599	337	123	79
Double tax relief	(3)	(5)	-	(20)	-	(5)
Total tax	478	330	880	472	403	296

Open-ended investment companies are exempt from tax on capital gains. Therefore, any capital return is not included in the above reconciliation.

At 31 December 2024 and 2023, there was no unrecognised deferred tax asset in each Fund in respect of surplus expenses. No deferred tax asset has been recognised as it is considered unlikely that these Funds will generate sufficient taxable profits in future to utilise any surplus expenses.

NOTES TO THE FINANCIAL STATEMENTS

9. Distributions

The distributions take account of revenue received on the issue of shares and revenue deducted on the cancellation of shares, and comprise:

	Global Equity Fund		Global Balanced Fund		Global Cautious Fund	
	2024 £'000	2023 £'000	2024 £'000	2023 £'000	2024 £'000	2023 £'000
Annual distribution	5,470	3,038	7,941	7,919	2,400	2,548
Add: Revenue deducted on cancellation of shares	392	166	1,116	690	265	140
Deduct: Revenue received on issue of shares	(1,778)	(372)	(1,716)	(3,348)	(544)	(891)
Net distribution for the year	4,084	2,832	7,341	5,261	2,121	1,797
Reconciliation of net revenue after taxation to net distribution for the year						
Net revenue after taxation	4,084	2,832	7,341	5,299	2,121	1,810
Revenue transferred to capital	-	-	-	(38)	-	(13)
Net distribution for the year	4,084	2,832	7,341	5,261	2,121	1,797

Details of the distributions per share are set out in the Distribution tables.

Margin balances received	330	-	1,170	-	-	-
Total creditors	516	968	1,591	677	212	347

13. Shareholders' funds

Each Fund may issue shares in the following share classes: the Standard Share Class, the Fund Management Fee Free Class and the Refundable Fee Class. Refundable Fee Class shares are issued to the Fund's Fee Reserve Administrator in relation to the performance fee. With effect from 31 October 2023, the Global Balanced Fund and the Global Cautious Fund may also issue shares in the Fixed Fee Share Class.

The Standard Share Class pays a performance related fee of 40% of the outperformance of that share class versus its Benchmark since the last Dealing Day. This fee is taken from the Standard Share Class and, instead of being paid in cash, is invested in shares of the Refundable Fee Class and held by the Fee Reserve Administrator, Orbis Investment Management Limited, in a Reserve. Each Dealing Day, whenever there remains value in the Reserve, a non-refundable draw of the lesser of (a) one-third annualised of the value of the Reserve, and (b) 2.5% annualised of the net asset value of the Standard Share Class, is paid to the Investment Manager through the redemption of Refundable Fee Class shares.

The performance fee is partially refundable to the Standard Share Class from the Reserve at the same 40% rate in the event of future underperformance, with the refund limited to the value of the Reserve. Should the Reserve be depleted, a Reserve Recovery Mark will be set and no further fees will be charged to the Standard Share Class or accrue to the Reserve until the Reserve Recovery Mark is exceeded.

The Fixed Fee Share Class pays a management fee of 1.2% per annum of the net asset value of that share class. This fee is accrued daily and paid to the Investment Manager monthly. Unlike the Standard Share Class, the fee is not dependent on the share class' performance.

The Fund Management Fee Free Class and the Refundable Fee Class bear no fees.

The net asset value, the net asset value per share, and the number of shares in issue for each share class is provided in the comparative table in each Fund's Fund Overview while the distribution per share for each class is provided in the Distribution tables.

All share classes have the same rights on winding-up of the Company.

14. Contingent liabilities

At 31 December 2024 and 2023, the Funds had no contingent liabilities.

15. Related party transactions

The ACD has appointed Orbis Investment Management Limited as the Investment Manager of the Funds. The ultimate beneficial owner of the ACD is the Allan & Gill Gray Foundation.

Orbis Investment Management Limited has agreed that for the year ended 31 December 2024, all operating expenses, with the exception of the cost of buying and selling assets, interest and brokerage charges, taxes, and the management and performance fees, will be met by it up to a total annual amount of the larger of (a) 0.1% per annum of the net asset value of each Fund, and (b) £1,000,000 per Fund. Orbis Investment Management Limited may, at its discretion, meet expenses in excess of this level.

At 31 December 2024, related parties, which include the Directors and Officers of the ACD, the Investment and Sub-portfolio Managers and the Investment Advisers held, in the Standard Share Class and the Fund Management Fee Free Class, in thousands, 1,231 and 113 (2023 - 1,737 and 117) shares, respectively, in the Global Equity Fund, and in the Standard Share Class, the Fund Management Fee Free Class and the Fixed Fee Share Class, in thousands, 71, 114 and 1 (2023 - 582, 114 and 1) shares, respectively, in the Global Balanced Fund and 4,871, 100 and 1 (2023 - 3,409, 100 and 1) shares, respectively, in the Global Cautious Fund.

NOTES TO THE FINANCIAL STATEMENTS

16. Investments

Fair value hierarchy

The table below categorises the Funds' financial instruments at 31 December measured at fair value within a three-level fair value hierarchy, based on the lowest level input significant to the fair value measurement.

- **Level 1** - Quoted prices (unadjusted) in active markets for identical assets or liabilities.
- **Level 2** - Valuation techniques for which the lowest level input significant to the fair value measurement is directly or indirectly observable.
- **Level 3** - Valuation techniques for which the lowest level input significant to the fair value measurement is unobservable.

Transaction costs as % of average net asset value										
Commissions	0.02%					0.04%				
Taxes and other fees	0.03%					0.04%				

Commissions, taxes and other fees are paid on equity, futures and option transactions. In addition, there may be a dealing spread between buying and selling prices. Bonds and forward currency contracts have no separately identifiable transaction costs; these costs form part of the dealing spread. Dealing spreads may vary considerably depending on the transaction value and market sentiment. At 31 December 2024, the dealing spread was, for the Global Equity Fund, 0.11% (2023 - 0.10%), for the Global Balanced Fund, 0.22% (2023 - 0.18%) and for the Global Cautious Fund, 0.18% (2023 - 0.15%).

18. Financial risk management

Each Fund's investment activities expose it to a variety of financial risks: market risk (which includes currency risk, interest rate risk and price risk), credit risk and liquidity risk.

The ACD has implemented a Risk Management Policy and Process enabling it to monitor and measure as frequently as appropriate the risk of a Fund's positions, and their contribution to the overall risk profile, while focusing on the investment objectives and policy in accordance with the Company's Prospectus. The investments of each Fund are managed by the Investment Manager and, where applicable, the Sub-portfolio Manager, in accordance with the investment strategy and investment guidelines of each Fund.

NOTES TO THE FINANCIAL STATEMENTS

(a) Market risk

(i) Currency risk

Currency risk is the risk that the value of the Funds' investments will fluctuate due to changes in foreign exchange rates.

The Funds hold securities denominated in foreign currencies, the value of which will fluctuate due to changes in exchange rates. For this reason, part of the Investment Manager's and/or Sub-portfolio Manager's research effort is devoted to forecasting currency trends. Taking into account these expected trends, the Investment Manager and/or Sub-portfolio Manager actively review and may adjust the Fund's currency exposure, generally using forward currency contracts, to assist in achieving the Fund's objective. The Fund's currency deployment therefore frequently differs significantly from the geographic deployment of its selected equities. The Funds do not designate any forward currency contracts as hedges.

The table below summarises the foreign currencies to which the Funds' exposure, through their holdings in securities, forward currency contracts, and other assets and liabilities, exceeds 5% of net assets at the year end:

Global Equity Fund		
	2024	2023
	%	%
US dollar	55	47
Japanese yen	14	17
Euro	5	10
Global Balanced Fund		
	2024	2023
	%	%
Japanese yen	14	15
Euro	11	10
US dollar	10	5
Norwegian krone	8	6
Korean won	3	5
Global Cautious Fund		
	2024	2023
	%	%
Japanese yen	7	8
US dollar	7	5
Norwegian krone	6	4
Euro	5	8

The impact on the net assets of a 5% movement against the sterling in all currencies to which the Funds were exposed as at 31 December 2024 would have been, for the Global Equity Fund 4.6%, for the Global Balanced Fund 3.1% and for the Global Cautious Fund 1.9% (2023 – 4.5%, 2.9% and 1.8%, respectively).

The average quarterly fair value of the forward currency contracts was 13.2% (2023 – 8.4%) of the Global Equity Fund's net assets, (10.2)% (2023 – (16.5)% of the Global Balanced Fund's net assets and (35.0)% (2023 – (35.7)% of the Global Cautious Fund's net assets. For the purpose of calculating the exposure values, forward currency contracts are included at face value.

NOTES TO THE FINANCIAL STATEMENTS

At 31 December 2024, the forward currency contracts were held with Citibank London, State Street Bank and Trust Company and UBS AG with the exposure to each of those counterparties, being the net unrealised gain or loss on the contracts held, individually representing less than 1% (2023 – less than 1%) of net assets for each Fund. Margin balances paid are included in cash and cash equivalents and margin balances received are included in other creditors on the Balance sheet. At the year-end, margin balances received in respect of forward currency contracts, in thousands, were £330 (2023 – nil) by the Global Equity Fund and £1,170 (2023 – nil) by the Global Balanced Fund.

(ii) Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

The Global Balanced Fund and the Global Cautious Fund hold cash, margin balances paid and received and investments in fixed income securities, the value of which may be affected by changes in interest rates. As part of the ACD's Risk Management Policy and Process, the Investment Manager monitors the effects of small parallel shifts to the yield curve on fixed income securities in the Funds.

At 31 December 2024, 2.0% (2023 – 2.0%) of the Global Equity Fund's net assets were held in interest bearing cash accounts.

The interest rate risk profile of the Global Balanced Fund's financial assets and liabilities was:

At 31 December 2024:

	Fixed rate £'000	Variable rate £'000	Non-interest bearing £'000	Total £'000
Financial assets				
US dollar	79,707	5,525	112,663	197,895

The majority of the Global Equity Fund and the Global Balanced Fund's investments are non-interest bearing. Accordingly, they are not subject to significant levels of risk due to fluctuations in the prevailing levels of market interest rates. As such, no interest rate sensitivity has been provided for these Funds. The impact on the Global Cautious Fund's net assets of a 1% change in the prevailing market interest rates as at 31 December 2024 would have been 0.9% (2023 – 1.0%).

(iii) Price risk

Price risk is the risk that the fair value of a financial investment will fluctuate as a result of changes in market prices, other than those arising from currency or interest rate risk.

The Funds are exposed to price risk arising from their investments in equity securities, fixed income securities and derivatives. The Investment Manager attempts to mitigate price risk through the use of a consistent and carefully considered investment approach, based on extensive proprietary investment research, appropriate diversification of investments and security selection in accordance with the investment guidelines of each Fund. In constructing a Fund's portfolio, the Investment Manager assesses not only each security's perceived risk and reward but also, in order to manage risk further by appropriate diversification, its correlation with the rest of the portfolio. The Investment Manager also takes into account the composition of the Fund's Benchmark and monitors the Fund's risk of underperforming its Benchmark by comparing the Fund's weighting in each industry, stock market and currency with that of the Benchmark and ensuring that deviations in such weightings, which are prompted by detailed "bottom up" research, are not inconsistent with its "top down" macroeconomic view. The Global Balanced Fund and the Global Cautious Fund use derivatives such as futures and options for efficient portfolio management purposes, with the intention of reducing the risk of loss associated with those Funds' equity and bond investments as a result of a significant decline in those markets in the regions in which those Funds are invested.

Considering the historical correlation between the return of the equities held by the Funds at year-end and the returns of their respective stock market indices, the estimated net impact from the Fund's equity and futures positions of a 5% change in those markets as at 31 December 2024 would have been, for the Global Equity Fund 4.3%, for the Global Balanced Fund 2.6% and for the Global Cautious Fund 1.1% (2023 – 4.7%, 2.5% and 1.2% respectively) of the Fund's net assets. Historical correlation may not be representative of future correlation. Actual results may differ and those differences could be material.

NOTES TO THE FINANCIAL STATEMENTS

The average quarterly net exposure obtained through the use of futures contracts was, for the Global Balanced Fund (17.0)% (2023 - (17.9)%) and for the Global Cautious Fund (16.1)% (2023 - (14.7)%) of the Fund's net assets. These contracts were held with J.P. Morgan Securities LLC, Morgan Stanley & Co. LLC and RBC Europe Limited with the exposure to each of those counterparties, being the initial margin held by them, individually representing less than 1% (2023 - less than 1%) of the Fund's net assets. Margin balances paid are included in cash and cash equivalents on the Balance sheet. At the year-end, margin balances paid in respect of futures positions, in thousands, were £3,516 (2023 - £4,058) by the Global Balanced Fund and £758 (2023 - £1,007) by the Global Cautious Fund.

(b) Credit risk

Credit or counterparty risk arises from the potential inability of a counterparty to a financial instrument to perform its contractual obligations, resulting in financial loss to the Funds.

Credit risk arises primarily from the Funds' forward currency contracts, cash and cash equivalents, margin balances paid and amounts due from brokers. For the Global Balanced Fund and the Global Cautious Fund, the fixed income securities expose that Fund to credit risk arising from the possibility that the debt issuer will be unable to pay interest and principal in a timely manner. At 31 December 2024, 5.2% and 0.1% of the Global Balanced Fund's net assets (2023 - 5.3% and 0.3%) and 8.9% and 0.2% of the Global Cautious Fund's net assets (2023 - 5.1% and 0.3%) were invested in below investment grade and unrated fixed-income securities respectively. The maximum exposure to credit risk at the balance sheet date is the carrying value of these financial assets net of any variation margins received.

The Investment Manager seeks to reduce the Funds' credit risk to the extent practicable by dealing only with counterparties that meet our strict contractual terms and trading practices, designed to mitigate counterparty insolvency risk; arranging for security transactions to be settled "delivery versus payment" whenever possible; and, to limit its risk to the amount of any net unrealised gain, by entering into agreements whereby all of its currency transactions with the counterparty to that agreement can be netted. Counterparty risk and issuer concentration limits, in place as a UCITS scheme, are calculated as a percentage of net assets, monitored and are applicable to all holdings of transferable securities, derivatives, fixed income securities and deposits. The credit quality of fixed income investments held in the Global Balanced Fund and the Global Cautious Fund is monitored using credit ratings assigned by independent credit rating agencies, where available.

(c) Liquidity risk

Liquidity risk is the risk that the Funds will not be able to generate sufficient cash resources to meet their obligations as they fall due.

For the Funds, exposure to liquidity risk may arise from the requirement to meet daily share cancellation requests, normally payable within four business days and daily margin calls on forward contracts for specified currencies and, for the Global Balanced Fund and the Global Cautious Fund, daily margin calls on stock market index futures.

The Funds invest the majority of their assets in investments that are actively traded on a stock exchange and can be readily disposed of. The Funds may also invest in securities or derivative contracts traded over-the-counter. These may not be able to be liquidated quickly at an amount close to their fair value to meet liquidity requirements or to respond to specific events such as deterioration in the creditworthiness of any particular issuer.

Subject to certain constraints, the Funds may borrow up to 10% of their respective net asset value on a temporary basis for up to three months.

NOTES TO THE FINANCIAL STATEMENTS

Derivative financial instruments

Subject to its investment restrictions, the Funds may utilise derivative financial instruments, primarily to manage their exposure to currency, stock market and, where applicable, bond market risk. The Funds only invest in such instruments if they are sufficiently marketable such that an objective market price may be obtained from a third party and they can be realised within a period considered acceptable. Thus, the instruments used are usually exchange-traded futures or option contracts, and forward currency contracts. Each Fund has entered into agreements whereby all its currency transactions with the counterparty to that agreement can be netted and, following various events of default, future counterparties and or the Fund may set-off amounts due to be paid to or by it. On the Balance sheets and Portfolio statements, unrealised gains and losses on forward currency contracts are offset only when they share the same maturity date, settle in the same currency and are held with the same counterparty. The Funds use the commitment approach to determine their global exposure relative to derivative instruments. Global exposure to derivatives may not exceed 100% of the net assets of a Fund.

19. Indemnification

Each Fund may enter into agreements that contain indemnifications or warranties for the benefit of service providers and others in connection with the Fund's investments. Each Fund's exposure under these agreements is dependent upon future claims that may be made against the Fund. The risk of material loss from such future claims is considered remote.

20. Events after the balance sheet date

As of 21 February 2025, the following share classes have shown a greater than 5% increase/(decrease) in their ex-dividend net asset value per share calculated in accordance with the valuation policies of the Prospectus:

	Global Balanced Fund %
Standard Share Class	5.4
Fund Management Fee Free Class	7.7
Fixed Fee Share Class	7.6
Refundable Fee Class	7.7

OTHER INFORMATION

Past performance is not a reliable indicator of future results. Values may fall as well as rise and you may get back less than you originally invested. It is therefore important that you understand the risks involved before investing. This report does not constitute advice or a recommendation to buy, sell or hold, or an offer to sell or a solicitation to buy shares of the Funds or other securities in the companies mentioned in it ("relevant securities"). It has not been prepared in accordance with legal requirements designed to promote the independence of investment research. Entities and employees of the Orbis Group are not subject to restrictions on dealing in relevant securities ahead of the dissemination of this review.

Remuneration Policy Disclosure. The ACD follows a remuneration policy which promotes sound and effective risk management consistent with the business strategy, values and interests of the ACD, the Company and the Shareholders (the "Remuneration Policy"). The Remuneration Policy – which includes rules relating to remuneration deferral, withholding, clawback and maximum ratios on variable compensation – is designed to reinforce long term objectives and Orbis' core values by aligning the interests of the Company and its Shareholders with those of the ACD's identified staff. In line with applicable law and regulatory guidelines, the ACD applies the Remuneration Policy in a manner which is proportionate to its size and internal organisation and the nature, scope and complexity of its activities. In accordance with paragraph 162 of the European Securities and Markets Authority's Guidelines on sound remuneration policies under the UCITS Directive and AIFMD, quantitative remuneration disclosures are not reported for the 2024 financial year. The Remuneration Policy, including a description of how remuneration and benefits are assessed, is available electronically at www.orbis.com/uk/individual/documents and a paper copy is available to investors free of charge upon request.

Assessment of Value. The ACD has assessed the value provided by the Funds for the year ended 31 December 2024 against the seven criteria prescribed in the FCA rules. A composite report describing the results of this assessment is available at www.orbis.com/uk/individual/documents.

Orbis OEIC SDR Product Level Reporting. The Orbis OEIC Funds do not have sustainability focused objectives and do not meet the criteria to use a UK sustainable investment label. The Orbis OEIC SDR Product Level Reporting disclosure is available at www.orbis.com/uk/intermediaries/funds/documents.

Our Client Support team is available to answer any questions that you may have. If you are contacting us about your account, we may ask you a few security questions first to ensure you are the true account owner.
